Professional Summary

Software Developer with 2+ years of experience building and maintaining production-grade applications across product engineering, full-stack development, and application security. Experienced in microservices-based architectures, Software Bill of Materials (SBOM) management, vulnerability intelligence, enterprise authentication, and CI/CD integrations. Proven ability to optimize performance-critical workflows, develop security-focused features, and integrate third-party platforms into complex applications.

Technical Skills

Languages:	JavaScript (ES6+), TypeScript, Python, Java, C, SQL
Backend:	Node.js, Express.js, REST APIs, Microservices, Event-Driven Architecture
Frontend:	React.js, Next.js, Tailwind CSS, Redux Toolkit, Zustand
Databases & Caching:	MongoDB, PostgreSQL, Redis
Messaging & Search:	Apache Kafka, RabbitMQ, Elasticsearch
DevOps & CI/CD:	Docker, Azure DevOps, Jenkins, GitHub Actions, Bitbucket Pipelines
Cloud Platforms:	AWS, Google Cloud Platform (GCP), Vercel
Operating Systems & Scripting:	Linux (Ubuntu), Windows, Bash
Security & SBOM:	SBOM, SPDX, CycloneDX, VEX, RBAC, SAML, LDAP
Integrations & Tools:	Git, GitHub, GitLab, Bitbucket, Jira, SIEM, Postman, Swagger/OpenAPI, Razorpay

Experience

CyberNX Technologies **Mar 2026 – Present**
Software Developer *Mumbai, India*

- Own the development and maintenance of the **SBOM (Software Bill of Materials) module** within a microservices-based product, delivering features across ingestion, vulnerability management, compliance, and enterprise integrations.
- Enhanced SBOM ingestion workflows supporting direct file uploads, code scanning, and custom CLI-based generation. Maintained and extended existing repository integrations for one-time ingestion from **GitHub, GitLab, and Bitbucket**.
- Developed and maintained **CI/CD integrations** for Microsoft Azure DevOps, Jenkins, Bitbucket Pipelines, and GitHub Actions to support SBOM ingestion in automated software delivery workflows.
- Resolved a critical performance issue affecting PDF reports for large SBOMs containing **7,000+ components**, optimizing generation to complete in **under 10 seconds**.
- Implemented granular **group-based and user-level RBAC** for SBOM access and management. Added **SAML authentication** and enhanced existing LDAP authentication and user management.
- Integrated **Jira** and implemented SIEM integration support, enabling application logs to be forwarded to customer-configured SIEM servers for centralized monitoring and analysis.
- Enhanced **SPDX and CycloneDX parsing** to preserve component and metadata information, and revamped existing **VEX** functionality to provide more comprehensive and consistent results.
- Introduced a dedicated **license enrichment service**, compliance field mapping, and automated email notifications for critical vulnerability detections.
- Collaborate closely with **QA and DevOps teams** to validate features, troubleshoot issues, streamline releases, and ensure reliable deployments across environments.
- Participate in **direct client calls** to understand product requirements, clarify technical expectations, and translate business needs into practical product enhancements.
- Support and mentor junior developers by helping them understand the codebase, development workflows, and team practices, enabling smoother onboarding and effective collaboration.

Techknit Industries **Dec 2023 – Mar 2026**
Full Stack Developer *Mumbai, India*

- Promoted from Next.js Developer to **Full Stack Developer in June 2025**, taking ownership of end-to-end feature development across frontend, backend, and deployment.
- Developed and maintained production applications using **Next.js, React.js, Node.js, MongoDB, and Tailwind CSS**, implementing REST APIs and business workflows.

- Built and optimized an e-commerce platform supporting **300–500 daily active users**, with server-side rendering, advanced product filtering, admin-configurable content, and Razorpay payment integration.
- Developed a hotel booking platform with role-based dashboards, one-time and split payment workflows, automated WhatsApp notifications, and GST-compliant PDF invoice generation.
- Implemented serverless scheduled jobs and administrative dashboards for a stock market simulation platform, reducing computation time by approximately **40%** and infrastructure costs by **25%**.
- Collaborated with stakeholders to translate business requirements into technical solutions and mentored junior developers on code quality, reusable components, and frontend best practices.

Achievements

Smart India Hackathon – Grand Finalist **Aug 2022**

- Designed a mobile application to capture images of nearby water sources and analyze water quality using image processing algorithms.
- Generated water quality reports featuring the Water Quality Index and parameters such as turbidity and suspended solids.

Megahack 3.0 – 2nd Runner-Up **Apr 2023**

- Secured second runner-up in a 24-hour hackathon as part of a team developing Aqua Bot, an autonomous boat using computer vision to detect and collect waterborne trash.

Education

Bachelor of Engineering in Computer Engineering **2019 – 2023**
University of Mumbai *Mumbai, Maharashtra*

- **CGPA: 8.6/10**
